BILATERAL DIGITAL BREAST TOMOSYNTHESIS AND BREAST ULTRASOUND:

History: 1st mammogram.

Digital breast tomosynthesis (DBT) was performed using the Siemens Mammomat Revelation Mammography system. Synthesized 2D mammogram views (SM) were created.

Density: There are scattered areas of fibroglandular density.

There are no suspicious dominant masses or suspicious microcalcifications.

Bilateral breast ultrasound is unremarkable without suspicious mass or suspicious area of attenuation. An occasional scattered small simple cyst is identified.

IMPRESSION:

No radiographic evidence of malignancy. Follow-up in 1 year recommended.

BI-RADS Category 2: Benign

Thank you for referring this patient.
